

Lightning Round

If Camille Heathcock doesn't get an A, then nobody should, because she was always helpful and supportive of her group members throughout the entire quarter.

The most difficult part of the class for me was the pre-class activities because it took a long time for me to get through the reading and absorb the material each week.

The easiest part of the class for me was the iteration segment, because it made sense to me; working with text has recently become something I love to do when I'm coding, which made the "singing a song" lab especially fun.

The organizational aspect of the class surprised and interested me the most because it is not a skill that I have previously been good at, but I was able to expand on it throughout the course of the class both with well-named files and simple code chunks.

Give yourself enough time on the weekend or after Monday morning to get the preview activities done; if you take them to heart the rest of your week will be much easier and probably more fulfilling (in STAT 331).
